

IP Security and Open Standards

What is the definition of an Open Standard?

How does this relate to the IP Security Market?

Benefits

Disadvantages

Is there a standard in the IP Video market?

Where is the industry at in terms of implementation?

OnVIF

What does this mean for the industry?

What about other security system components?

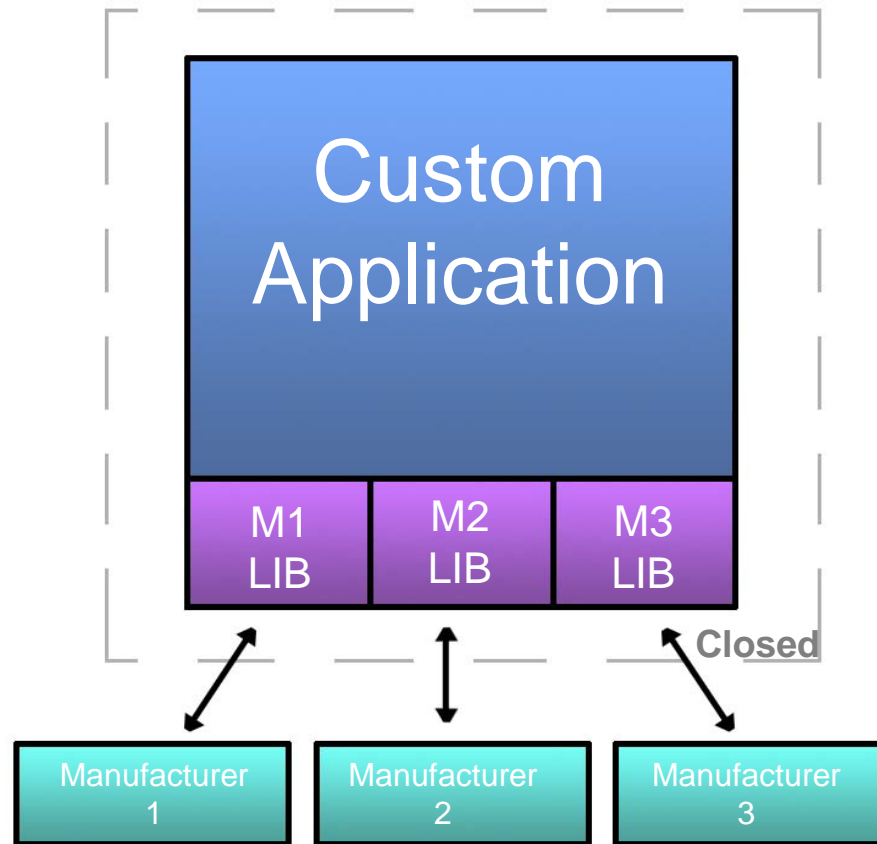

So what's the answer?

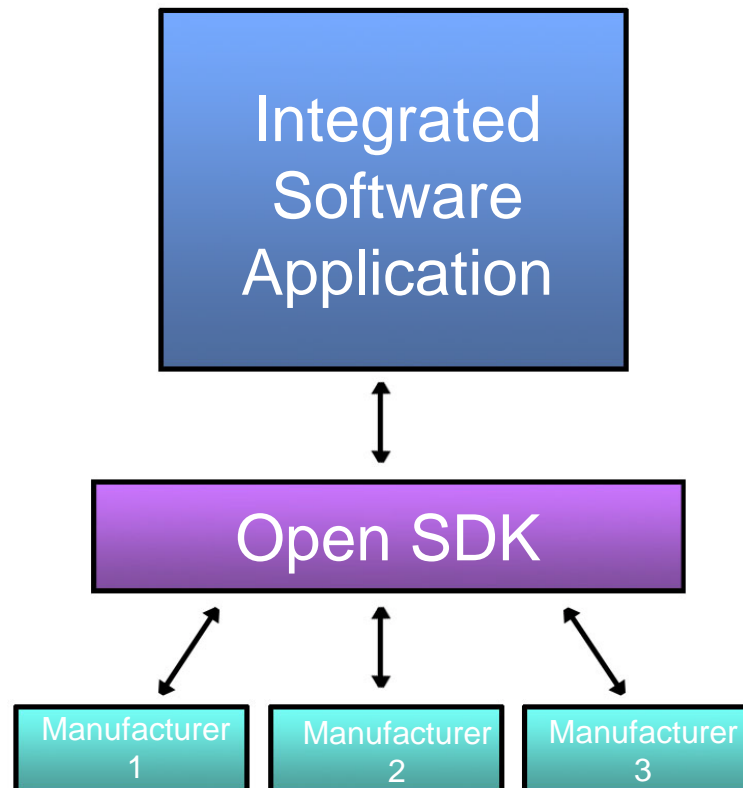

Single Vendor software approach?

Integrated Application?

Conclusion

- Open standards that will allow interoperability of video components are in development
- A Security Management System must work with more than just CCTV equipment
- For the best of both worlds an open software solution, with ONVIF support, is required for a true **Open Architecture**
